To Whom it may concern,

Cleanitise

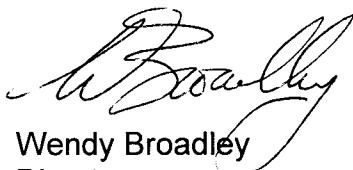

We have been using the Cleanitise Chemical at one of our sensitive research sites based in Cambridge for over 3 months following their request for increased cleaning requirements to help reduce the possible spread of the A H1N1 Flu virus (Swine Flu).

We have found the Cleanitise chemical to be extremely effective and versatile on a wide range of surfaces. Not only does it leave treated surfaces germ free, it also produces a clean, smear free surface. We are not only using it on high touch areas such as door handles and hand rails but for all cleaning applications on the site, including the laboratory floor areas. We have found it particularly effective in the toilet, shower rooms and kitchen areas even in areas involving a lot of stainless steel surfaces.

Our staff have found the versatility and effectiveness of Cleanitise extremely easy to use and due to the wide range of applications are using it as a sole cleaning chemical on the site with great results. We have also found that it is economical in use, especially when compared to other bactericidal products.

Although it is hard to measure the effect of containing the Swine Flu virus, our client is extremely happy with the results achieved with the chemical and the low level of swine flu cases reported on the site.

We are happy to recommend the Cleanitise product as the industry leading standard.
